

1. Describe how the number 30 relates to audits.

30 is related to the sample size that is the midpoint of the range for probe audits.

2. A population of 10,000 items is getting audited. List in order of sample size from least sample size to most the audits that can be done.

- Probe
- Discovery
- Full statistical audit

<p>3. A healthcare provider must repay to Medicare money paid for a specific type of billed claim. What type of audit is the MOST likely one used to identify the amount of repayment?</p>	<p>full statistical audit</p>
<p>4. For an audit to provide a 100% confidence level of something being audited, what must occur?</p>	<p>The only way to obtain 100% confidence is to audit 100% of the population</p>

5. Which of the following would always require the largest sample size, an audit done at the 95% confidence level or an audit done at the 99% confidence level?

Unable to determine since sample size is a function of both the confidence level and the margin of error which based on the question we do not know. (Hint: watch out when you see words such as “always”)

6. Auditing and monitoring contribute to the effectiveness of a compliance program because of their ability to.....
