suggestions listed in  
NISTIR 8374

Use antivirus software at all times. Set your software to automatically scan emails and flash drives.  
92 responses

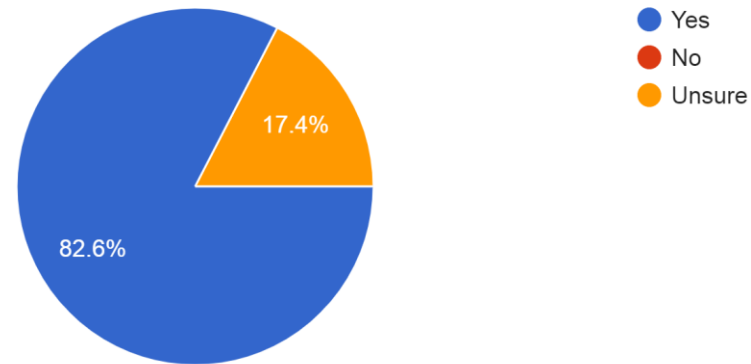

Keep computers fully patched. Run scheduled checks to keep everything up-to-date.  
92 responses

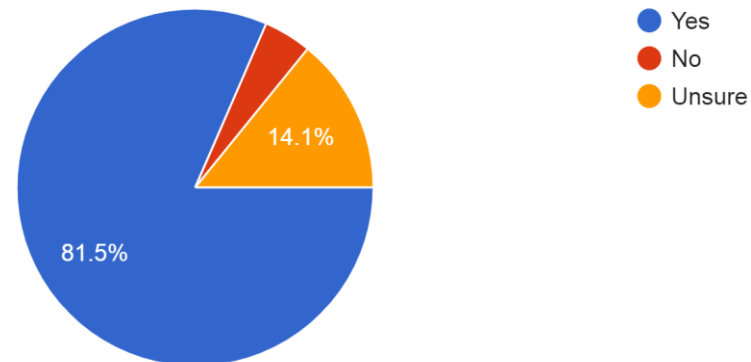

Block access to ransomware sites. Use security products or services that block access to known ransomware sites.

92 responses

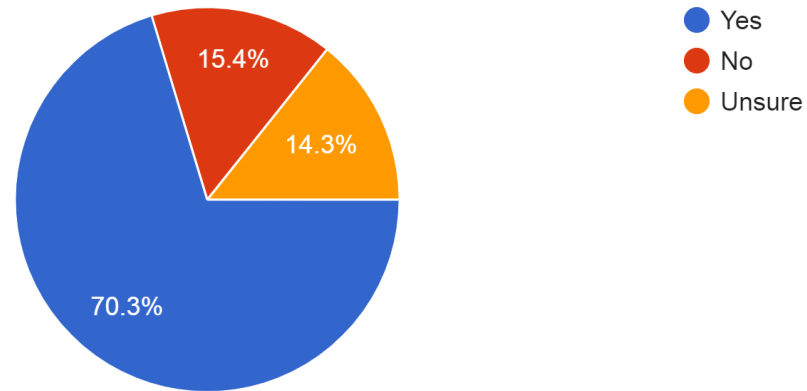

Allow only authorized apps. Configure operating systems or use third-party software to allow only authorized applications on computers.

92 responses

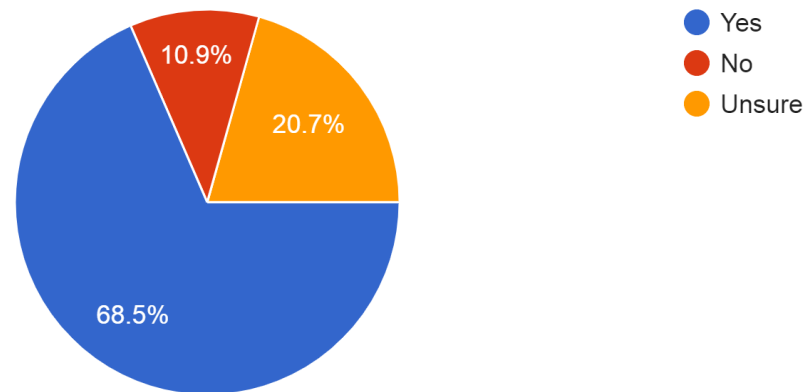

Restrict personally owned devices on work networks.

91 responses

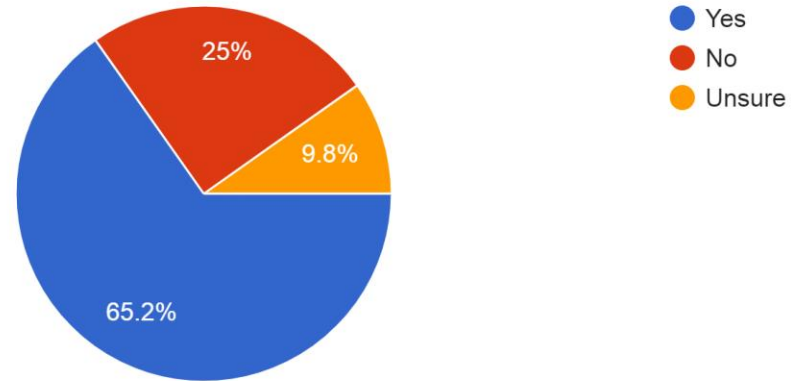

Use standard user accounts versus accounts with administrative privileges whenever possible.

92 responses

Avoid using personal apps—like email, chat, and social media—from work computers.

92 responses

Beware of unknown sources. Don't open files or click on links from unknown sources unless you first run an antivirus scan or look at links carefully
